## Downgrades are NOT supported

---

Due to the company name change from Hitachi Data Systems to Hitachi Vantara we have had to change the certificate used to sign the binary files which make up the HDID install. The existing HDS certificate has now expired and this means the HDID master will not push upgrade its clients. HDID 6.7.7 is the first release which can resolve the issue. However, this means that in order to be able to push upgrade, Windows nodes need to be manually installed with HDID 6.7.7 via the supported upgrade paths. It is still possible to push upgrade non-Windows nodes. See HDID-EN-007 for more information

- (1) 5.5.0 is not a supported version and MUST be upgraded to 5.5.1 or later.
- (2) 5.5.1 and 5.5.2 are incompatible. Therefore, all nodes must be running the same version.
