

OS Certification support for Quanta servers for HDS solutions

Note: Configurations added since the last matrix will be shown in **red** text.

Introduction

Use this interoperability matrix to check whether a proposed OS for a customer configuration is supported. This matrix shows OS certification status for the Quanta server models T41S-2U and D51B-2U.

Please refer to other relevant OS support matrices for details on storage, switch and HBA interoperability.

If a combination does not appear on the OS support matrix, the customer's Hitachi Data Systems Sales Engineer (SE) or other HDS field service employee must submit an Interoperability Support Request in order to gain support for the new configuration.

Note that in some cases a component OS, driver, firmware version may no longer be supported (end of service life, EOSL) in which case the customer should choose components that are already supported from the matrix. Click on a tab to view associated components.

Gx00 refers to : G800, G600, G400 and G200

Fx00 refers to : F800, F600, F400 and F200

Gx000 refers to : G1500 and G1000
